

VA 402
LITERARY JUKEBOX APPLICATION
BASIC LAYOUT CHART
IPEK C. EL

SPLASH SCREEN

The moment the app icon is touched we are directed to our splash page that will show until the application loads.

scroll down to view after 8 posts tap to load OR automatic load

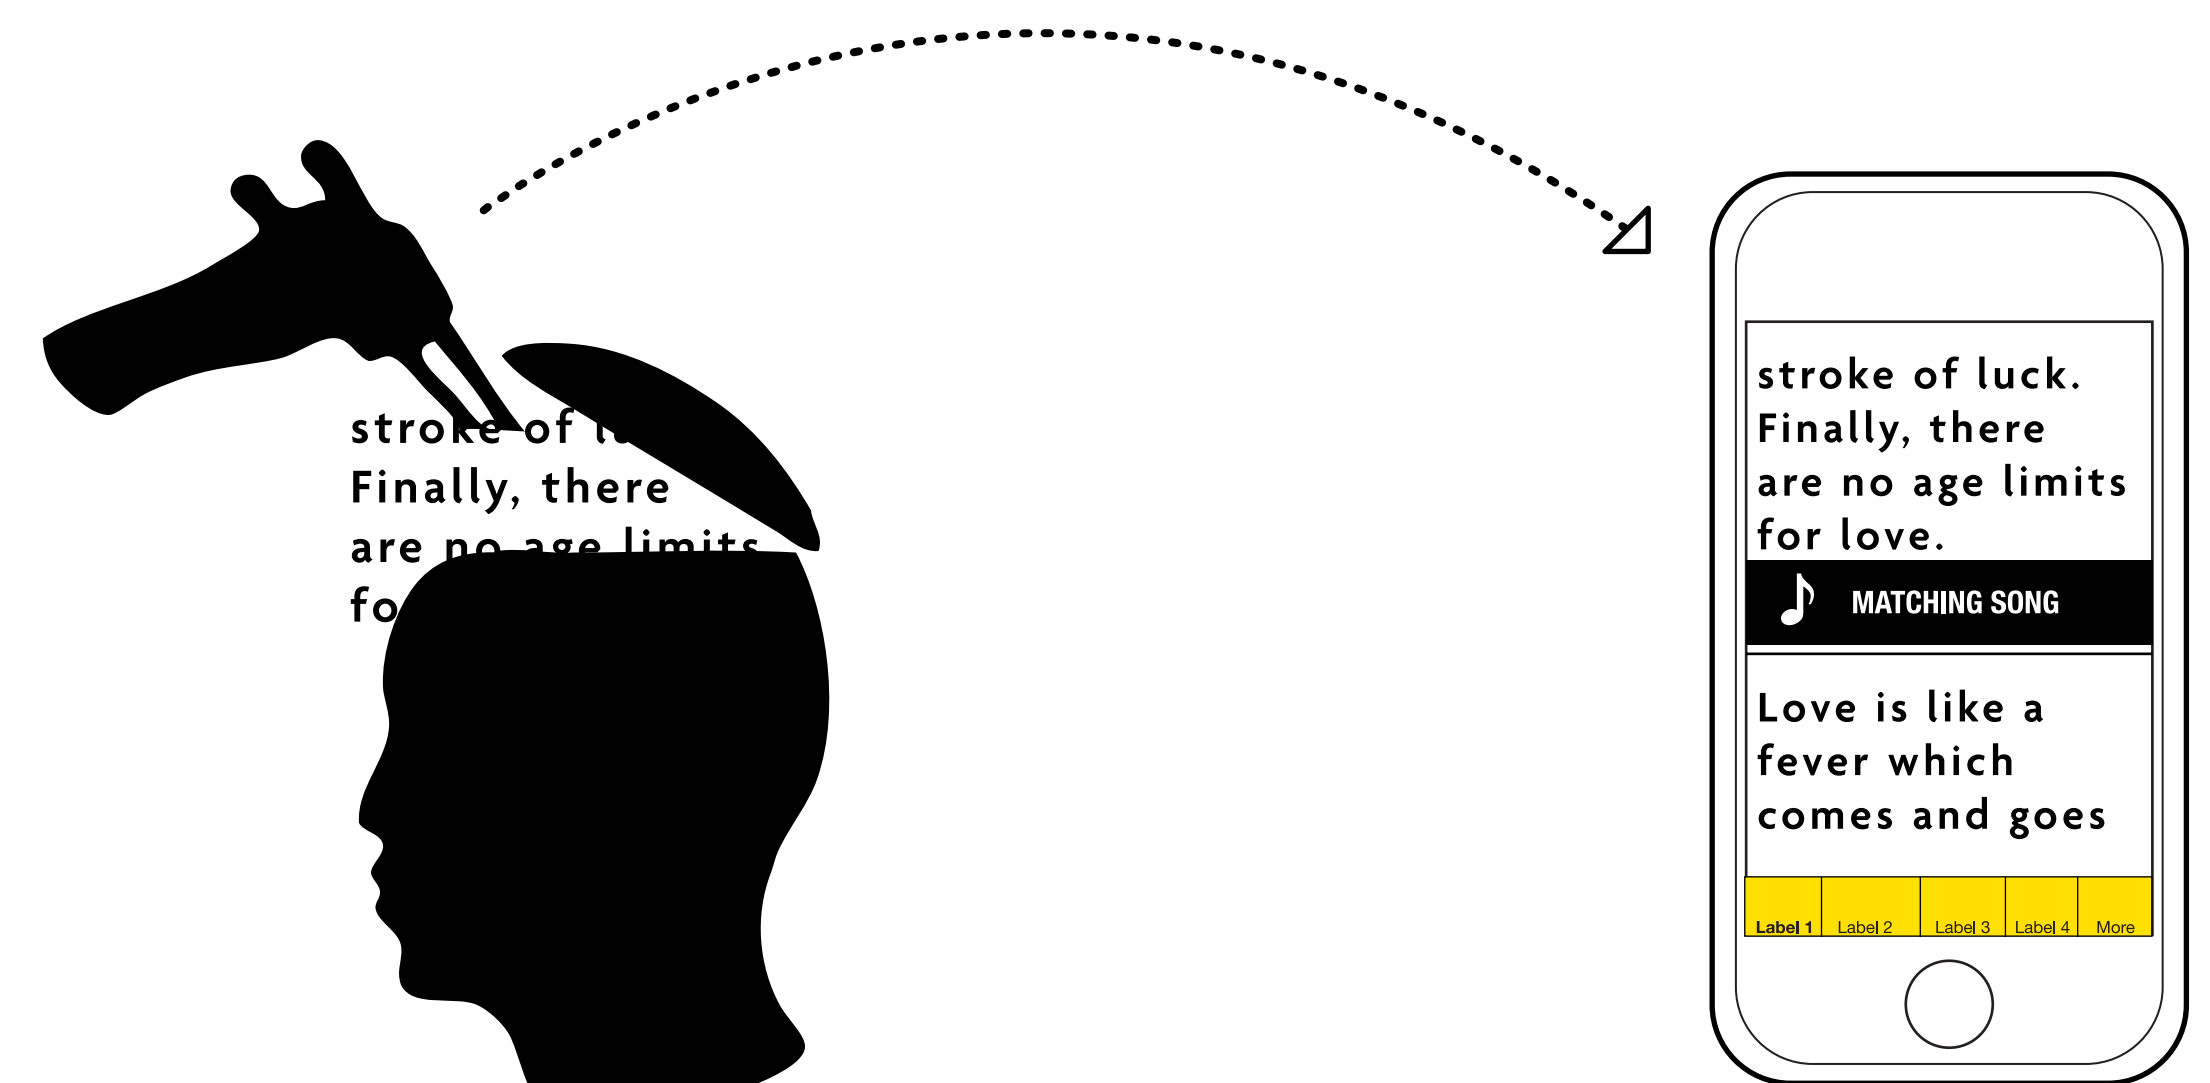

MAIN NAVI MENU
 The number of columns will appear while designing

DASHBOARD

When we get inside the app the first screen is the dashboard. Where the viewer will see the up to date posts that are taken directly from Literary Jukebox website. Approximately 2 posts per screen and 8 posts when scrolled down. Tap to upload more.

DECISION 1:
 Will the user be able to listen the song?
 Will it be buffered from a third party such as soundcloud or groovespark?

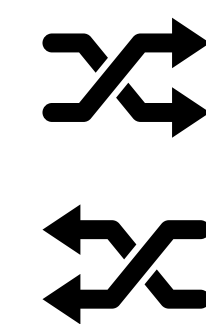

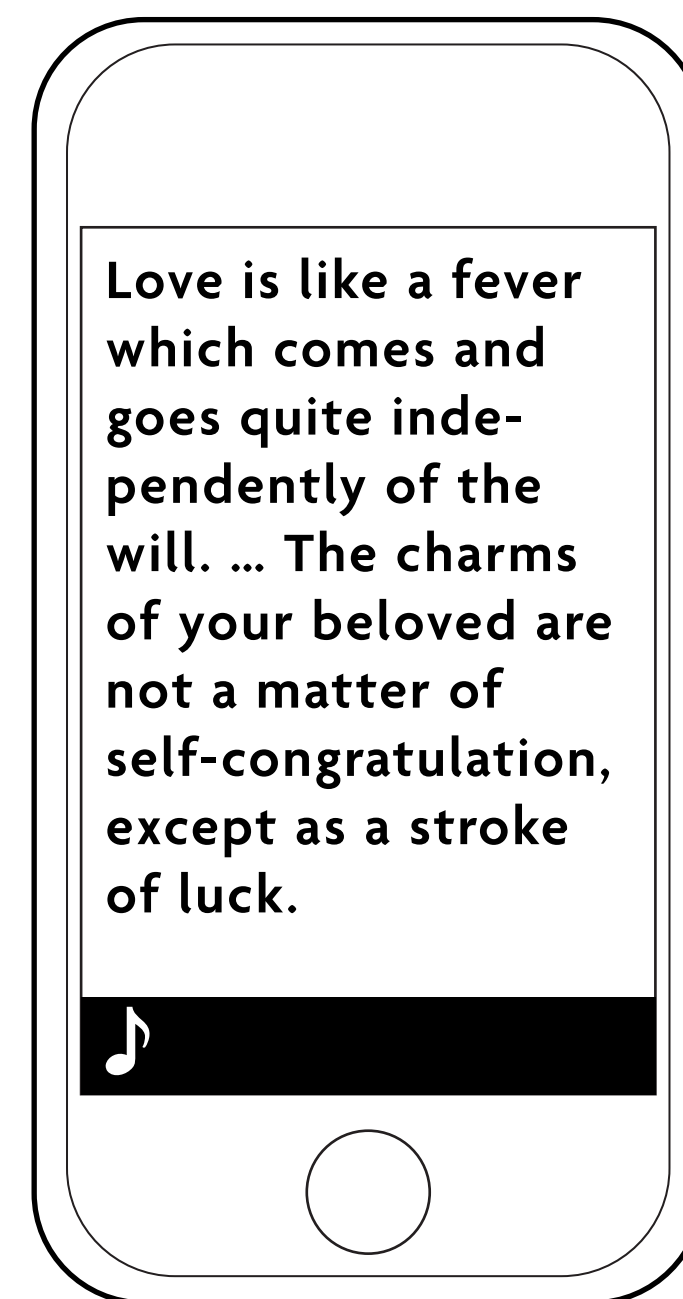

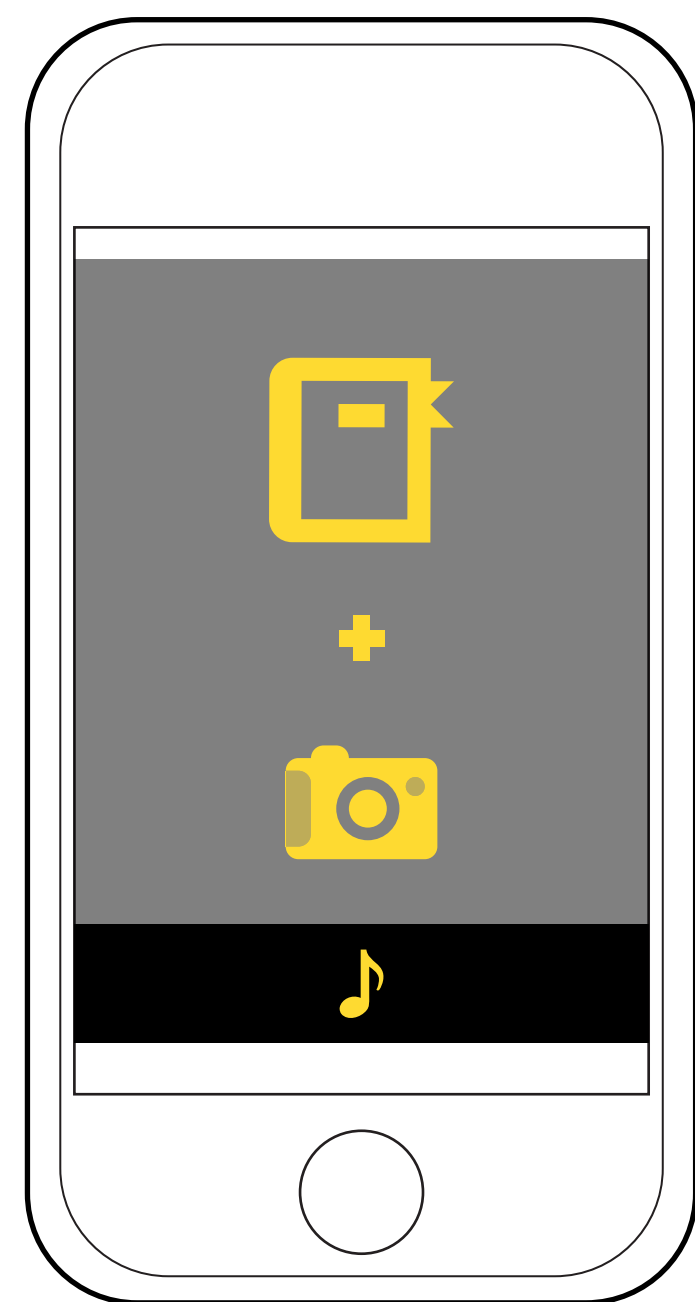

LITERARY JUKEBOX
<http://literaryjukebox.brainpickings.org/>

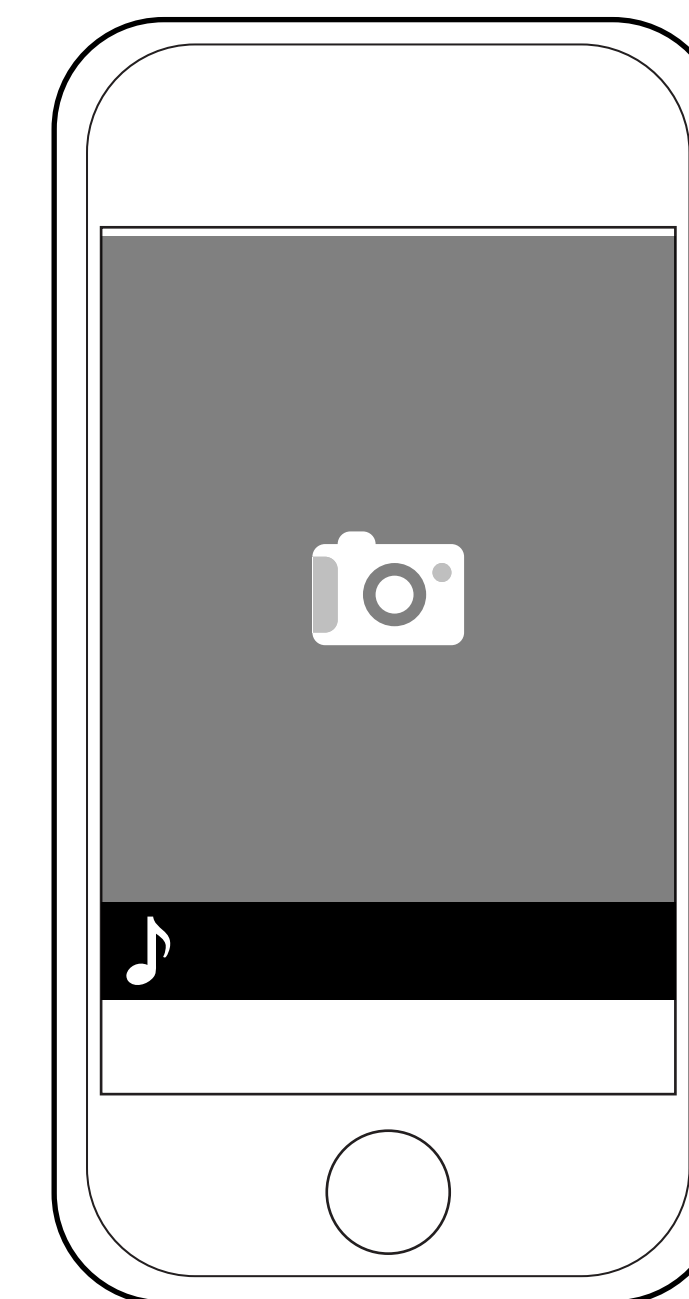

+ **ADD NEW POST**

The screen where the user will be able to:
 1- Note down the desired text / quote.
 2- Take a picture and paste the desired visual.
 3- Pick the song the matches with the quote.

DECISION 2:
 Will the user share their work over wi fi?
 -No.
 The data required to upload and paste the desired photo?
 Where will the song come? Itunes connection?
 Third party internet source?

Double tapping in between screens

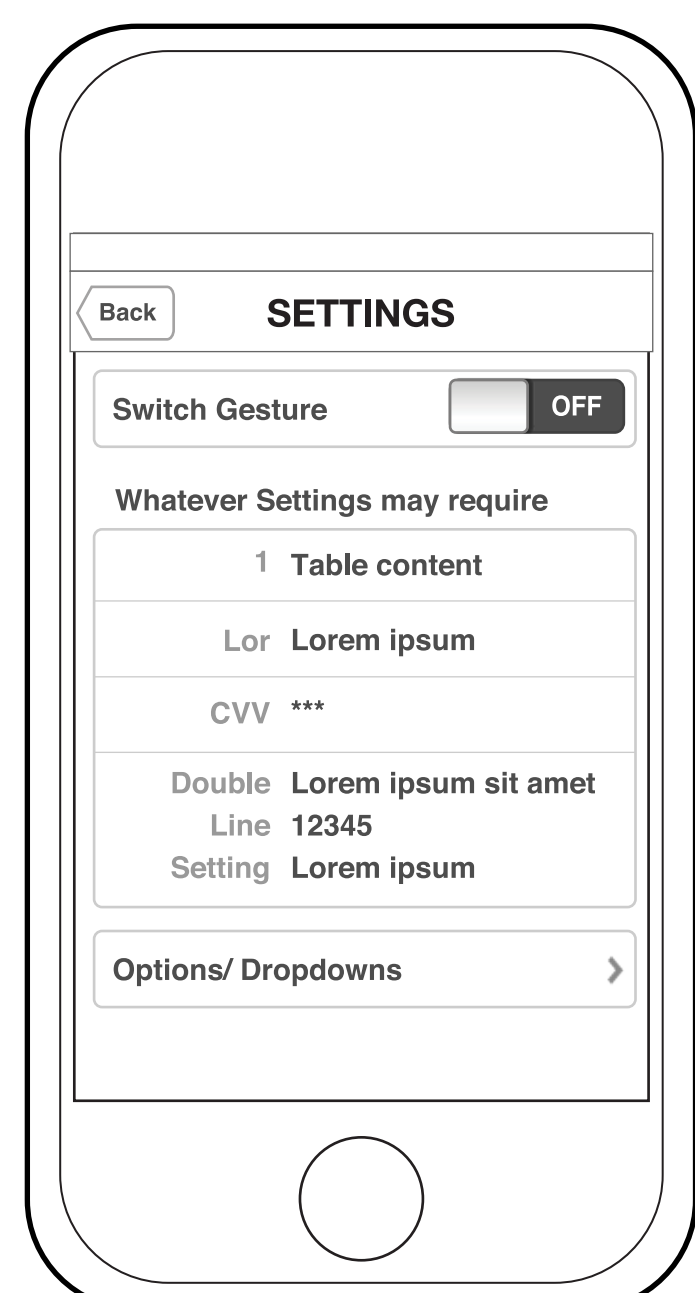

VIEW POST

Where the viewer sees the desired post full screen. And by double tap gesture turn over the text into the visual. Double tap returns back to the text.

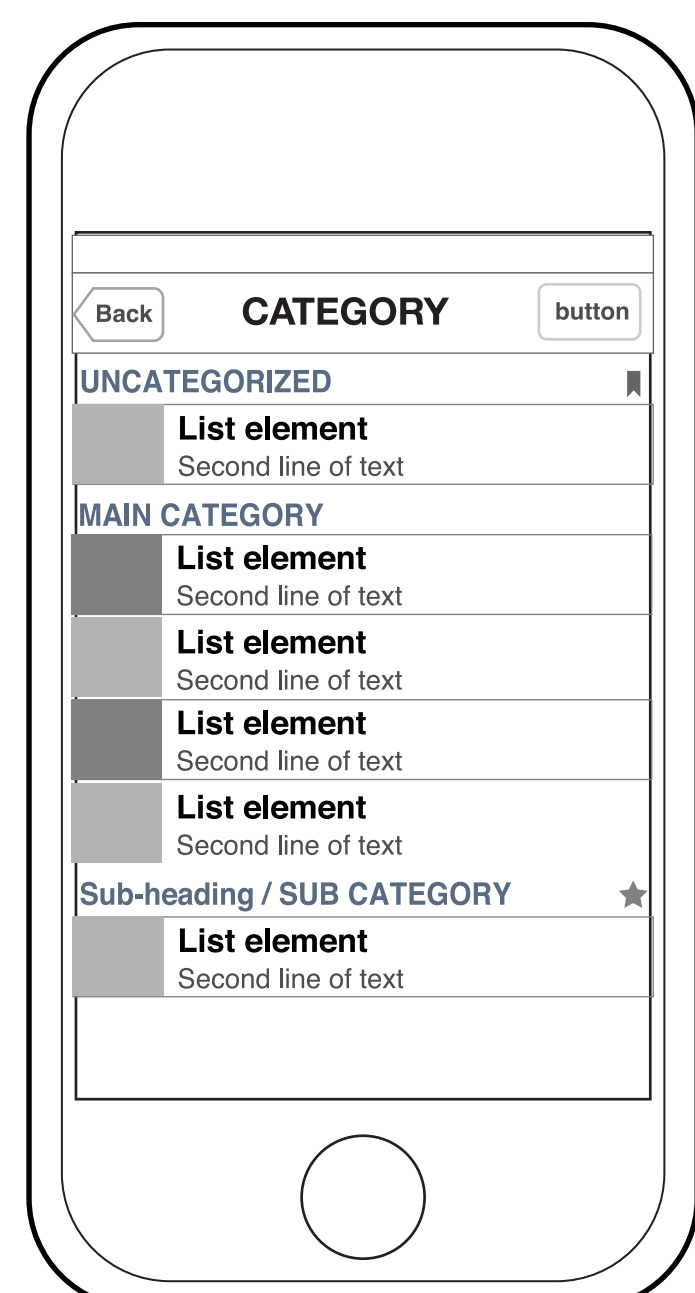

SETTINGS

The required settings will be apparent through the design. It can require many forms of touch gestures, that is because I plan to use standard iphone ui.

VIEW CATEGORIES

Users will be enabled to categorize their posts so that the application can be like our little notebooks. Categorization will have it's own full page display.

DELETE

For plan freaks like me, I wish to have a complete page for deleting activities where from a single post to a whole category can be deleted easily.
